

# PRODUCT INFORMATION

## VSK F

angled

- Grinding and finishing in one operation
- Fine surface finish

Thanks to the unique combination of two important product properties, the VSK VISION delivers major advantages for the surface finishing of stainless steel. It combines an alternating abrasive cloth and non-woven abrasive on one disc. This makes decorative surface finishing (non-woven abrasive) possible with simultaneous material abrasion (abrasive cloth) – saving the operator an entire process step. Optimum revolutions: 3,000–3,500 rpm
